

Other Opportunities

Yes, there is a demand for physical science majors in industry. Most of these opportunities are in the field (analytical chemists, polymer chemists, etc.) but other industries would like to hire our students as well, so do not be surprised if some of these opportunities are outside of your field.

If you took the opportunity to stop in and talk with me about your major, you probably remember me touting the benefits of a physical or forensic science as being more than just learning the technical tools of the trade. Indeed, you learn critical thinking, problem solving skills and observational capabilities that make you golden in just about any other field as well. This is foremost in my mind, because we've already had a request for our students this year, not for graduates or graduating seniors, but students seeking part time work. Anyway, check here periodically for research opportunities, requests for graduates and more.

August 31, 2007

A good friend of mine informs me that **Wells Fargo Financial** is seeking part time (or full time) employees. Apparently, they have 125 positions available, so if you need a job, this might just be what you are looking for. I'm not even going to list all of the jobs, but a smattering of possibilities include analysts, programmers, collections callers, service representatives, and more. If you would like to find out more information, contact Pam Schut at pamschut@wellsfargo.com and be nice to her; she's a good friend of mine!
